Web Application Developer

Junior web developer with experience working on agile teams building highly scalable web applications. Applies strong analytical and communication skills to drive efficiency and cohesion in product development.

Professional Experience

DEEPTREE | Toronto | 2016 - 2017
Deeptree supports the modern web development team by building tools to improve productivity and augment team workflows.

Founder, COO
Worked in a team of four to build Cadence (highly scalable project management tool) and CadenceBot (a lean code review assistant for Slack).

- Performed front-end development for Cadence utilizing the React library.
- Full stack development for CadenceBot using the Django framework for Python.
- Secured funds for operational expenses through business planning and market research
- Built a dedicated user base by performing business development and product management functions

MIOVISION| Kitchener, ON | 2010 - 2016
The largest and most trusted traffic data platform in the world. Miovision manufactures industry leading hardware and software for the collection and reporting of traffic data.

Data Services Manager
Managed multiple aspects of the Data Services team, including: performance management, COGS reduction, and KPI tracking. Highlights include:

- Lead projects that covered engineering, marketing, and operations
- Built a web based dashboard system for the Operations team using Tableau
- Managed our internal operations products, QAP and MPP, that drove 60% of annual revenue
- Forecasted requirements for a $5 Million/year Operations budget using Excel and Netsuite
- Drove cost reductions of >20% by process improvement and increased staff retention

Education
